

US Cyber Games Final Project

Forensics Challenges

Dimitrios Skrettas
“@Spacey” in discord

The first challenge I have created is named “End of the line”. The challenge itself is simple, I created a morse code audio file containing the flag “SVBRG{AUDACITYROCKS} in Morse Code. The twist is that the audio file has been reversed. This reminds me of a challenge I completed when I was very much a beginner, where the flag was in DTMF frequencies. My team and I had determined that was the case, but were having issues getting an acceptable string using the tool we had, turned out, the .wav file was reversed. There are many sites that can be used in order to reverse the audio file, or it can be done in the music software Audacity, which is the inspiration for the flag. After which, the Morse code can be manually decoded, or done using an online morse code decoder.

The second challenge I have created is named “Echo”. In order to solve the challenge, the user will open the file within a Hex Editor, and find that at the bottom of the hexadecimal, the flag can be found. SVBRG{HEXEDITING} is the flag. This challenge reminds me of my first forensics class, when we used the windows CLI to copy files into other files, to pass messages to each other, for an assignment.

These challenges have been zipped together, and emailed to Coach Varsalone, and Coach Elliot.
